

## THE QUEST™ SYSTEM

**BUILT FOR CANADA'S  
TOUGHEST WEATHER**

American Standard® Heating and Air Conditioning's Quest ultra-low ambient heat pump and air handler offer an exciting new option for Canadian homeowners who need a year-round HVAC system that stands up to extreme temperatures. In addition to excellent efficiency, the Quest system gives homeowners the opportunity to benefit from rebates, reduce their carbon footprint, and enjoy the comfort and energy savings from the latest smart-home technology.

**The Quest System Advantage**

- ✓ **Versatility:** The side discharge condenser's ground or wall vertical installation gives options in tight spaces.
- ✓ **Smart-home ready:** Compatible with a conventional 24 VAC thermostat control, for easy addition of American Standard Home.
- ✓ **Confidence:** Systems are backed by a 10-year parts and compressor registered warranty.
- ✓ **Ultra-quiet:** Operating at volumes as low as 55 dB, the outdoor side-discharge unit is less quiet than a normal conversation.
- ✓ **Ultra-performance:** Capable of generating heat at far lower temperatures than standard heat pumps—as low as -30 °C, with an auxiliary heat option for colder regions—and generating air conditioning up to 54 °C.
- ✓ **Advanced technology:** Inverter rotary technology plus variable speed operation delivers outstanding efficiency and minimizes temperature swings.
- ✓ **Save two ways:** High efficiency (ratings up to 20 SEER/10.5 HSPF) helps save on energy bills; Energy Star® options are available and may qualify for rebates.
- ✓ **Award-winning quality:** American Standard cold climate heat pumps are built to provide durable, efficient, and quiet comfort in all regions of Canada—no matter what the weather forecast looks like.
